

INSTRUCTION MANUAL

SIL 2 Temperature Signal Converter and Trip Amplifiers
DIN-Rail
Model D5273S

Characteristics

General Description: The Temperature Converter & Trip Amplifier D5273 accepts a low level dc signal from millivolt, thermocouple or 2-3-4 wire RTD or transmitting potentiometer sensors, located in Hazardous Area, and converts, with isolation, the signal to drive a Safe Area load, suitable for applications requiring SIL 2 (according to IEC 61508:2010) level in safety related systems for high risk industries. Output signal can be direct or reverse. Modbus RTU RS-485 output is available on Bus connector. Cold junction compensation can be salety related systems for high his industries. Output signal can be direct or reverse, would still to K5-405 output is available on Bus connector. Cold junction compensation can be programmed as automatic, using an internal temperature sensor or fixed to a user-customizable temperature value. D5273S offers two independent trip amplifiers via two SPDT output relays. Mounting on standard DIN-Rail, with or without Power Bus.

Fault Detection: D5273S is able to detect multiple fault sources:

- Sensor Burnout (i.e. when input is disconnected);
- Sensor out of configured range;

- Analog output saturation (beyond user-configured output limits);

Internal module fault:

- Module out of allowed temperature range (-40 to + 70 °C).

The module can be programmed to reflect such fault conditions on Analog Output (Upscale, Downscale, Custom Value) and/or on each Alarm Output.

Technical Data

Supply: 24 Vdc nom (18 to 30 Vdc) reverse polarity protected, ripple within voltage limits \leq 5 Vpp, 2 A time lag fuse internally protected. Current consumption @ 24 V: 72 mA with 20 mA output and relays energized, typical. Power dissipation @ 24 V: 1.7 W with 20 mA output and relays energized, typical. Isolation (test voltage): I.S. In/Out 2.5 kV; I.S. In/Supply 2.5 kV; Out/Supply 500V; Out/Alarms 1.5 kV; Alarms/Supply 1.5 kV; Alarms/Alarms 1.5 kV. Input: See section "Input specifications" for more details on Input sensors. Possibility of configuring user customized sensor (TC or RTD). Choice between °C/°F. Integration time: from 50 ms to 500 ms. Resolution: 1 μV on mV/TC, 1 mΩ on RTD/resistance, 0.0001 % on potentiometer. Visualization: 0.1 °C on temp., 10 μV on mV, 100 mΩ on resistance, 0.1 % on pot. Input range: -500 to +500 mV for TC/mV, 0-4 kΩ for resistance. Measuring RTD current: \leq 0.15 mA. Thermocouple reference junction compensation: programmable: internal Pt1000, fixed, external or remote.

Thermocouple reference junction compensation: programmable: internal Pt1000, fixed, external or remote.

Thermocouple burnout current: ≤ 50 μA.

Output: Fully customizable 0/4 to 20 mA, on max. 300 Ω load source mode, current limited at 24 mA. In sink mode, external voltage generator range is V min. 3.5V at 0Ω load and V max. 30V. If generator voltage Vg > 10 V, a series resistance ≥ (Vg - 10)/0.024 Ω is needed. The maximum value of series resistance is (Vg - 3.5)/0.024 Ω.

DC Load breaking capacity:

##

200

Resolution: 1 μA current output.

Transfer characteristic: linear, direct or reverse on all input sensors.

Response time: ≤ 20 ms (10 to 90 % step).

Output ripple: ≤ 20 mVrms on 250 Ω load.

Modbus Output: Modbus RTU RS-485 up to 115.2 kbps for monitor/configuration/control.

Alarm:

Trip point range: within rated limits of input sensor. ON-OFF delay time: 0 to 1000 s, 100 ms step. Hysteresis: within rated limits of input sensor.

Output: two voltage free SPDT relay contacts (NO and NC).

Contact material: Ag Alloy (Cd free), gold plated.

Contact rating: 4 A 250 Vac 1000 VA, 4 A 250 Vdc 120 W (resistive load),

1 A 24 Vdc, 220 mA 125 Vdc, 110 mA 250 Vdc for UL.

Contact min. switching current: 1 mA.

Mechanical / electrical life: 5 * 10⁶ / 3 * 10⁴ operations, typical.

Operate / release time: 8 / 4 ms, typical.

Bounce time NO / NC contact: 3 / 8 ms, typical.

Frequency response: 10 Hz maximum.

Fault: Enabled/disabled. Analog output can be programmed to reflect fault conditions via downscale, highscale or customized value forcing. Fault conditions are also signaled via BUS and by red LED on front panel for each channel.

Fault conditions are: Sensor burnout, Sensor out of range, Output saturation, Internal fault, Module out of temperature range.

Performance: Ref. Conditions 24 V supply, 250 Ω load, 23 ± 1 °C ambient temperature, slow integration speed, 4 wires configuration for RTD.

**Total Conditions 24 V supply 250 Ω load, 23 ± 1 °C ambient temperature, slow integration speed, 4 wires configuration for RTD.

**Total Conditions 24 V supply 250 Ω load, 23 ± 1 °C ambient temperature, slow integration speed, 4 wires configuration for RTD.

Ref. Continuous 24 v supply, 230 mod, 23 ± 1 Continuous temperature, s Calibration and linearity accuracy: see section "Input specifications". **Temp. influence:** see section "Input specifications". **Ref. junction compensation accuracy:** $\leq \pm 1$ °C (internal Pt1000 sensor).

Output:

Calibration accuracy: \leq ± 10 µA Linearity accuracy: \leq ± 10 µA. Supply voltage influence: \leq ± 0.02 % FSR for a min to max supply change. Load influence: \leq ± 0.02 % FSR for a 0 to 100 % load resistance change.

Temp. influence: $\leq \pm 2 \mu A/^{\circ}C$

Compatibility:

©E mark compliant, conforms to Directive: 2014/34/EU ATEX, 2014/30/EU EMC, 2014/35/EU LVD, 2011/65/EU RoHS.

Environmental conditions:

Operating: temperature limits - 40 to + 70 °C, relative humidity 95 %, up to 55 °C. Storage: temperature limits - 45 to + 80 °C. Max altitude: 2000 m a.s.l. Safety description:

Approvals:
BVS 12 ATEX E 053 X conforms to EN60079-0, EN60079-17, EN60079-11, EN60079-15.
IECEx BVS 12.0050X conforms to IEC60079-0, IEC60079-11, IEC60079-15.
INMETRO DNV 13.0110 X conforms to ABNT NBR IEC60079-0, ABNT NBR IEC60079-11, ABNT NBR IEC60079-15, ABNT NBR IEC60079-26.
UL & C-UL E222308 conforms to UL 61010-1, UL913, UL 60079-0, UL60079-11, UL121201 for UL and CAN/CSA C22.2 No. 61010-1-12, CSA-E60079-0, CSA-E60079-11, CSA-C22.2 No. 213 for C-UL.
FM 3046304 and FMC 3046304C conforms to Class 3600, 3610, 3611, 3810, ANSI/ISA-60079-0, ANSI/ISA-60079-11, ANSI/ISA-60079-15, C22.2 No. 213, C22.2 No. 60079-0, C22.2 No. 60079-11, C22.2 No. 60079-15.
C-IT.MH62.B.04182 conforms to GOST R IEC 60079-0, GOST R IEC 60079-11, GOST R IEC 60079-15.
CNV Type Approval Certificate No. A-13625 and KR No. MIL20769-EL002 Certificates for maritime applications.
TUV Certificate No. C-IS-722160171, SIL 2 conforms to IEC61508:2010 Ed. 2.

TUV Certificate No. C-IS-722160171, SIL 2 conforms to IEC61508:2010 Ed.2.
TÜV Certificate No. C-IS-36198-09, SIL 3 Functional Safety Certificate conforms to IEC61508:2010 Ed.2, for Management of Functional Safety.

Mounting: EN/IEC60715 TH 35 DIN-Rail, with or without Power Bus.

Weight: about 195 g.

Connection: by polarized plug-in disconnect screw terminal blocks to accommodate terminations up to 2.5 mm² (13 AWG).

Location: installation in Safe Area/Non Hazardous Locations or Zone 2, Group IIC T4 or Class I, Division 2, Group A,B,C,D, T4 or Class I, Zone 2, Group IIC, T4.

Protection class: IP 20.

Dimensions: Width 22.5 mm, Depth 123 mm, Height 120 mm.

Programming

The module is fully programmable. Operating parameters can be changed from PC via PPC5092 adapter connected to USB serial line and SWC5090 software. Measured values and diagnostic alarms can be read on both serial configuration or Modbus output line.

SWC5090 software also allows the Monitoring and Recording of values. For details please see SWC5090 manual ISM0154.

SIL 2 D5273

⊘13⊘14⊘15⊘16

- SIL 2 according to IEC 61508:2010 (Route 2H) with Tproof = 10 / 20 years (≤10% / >10 % of total SIF), for analog current source/sink output.
- SIL 2 according to IEC 61508:2010 (Route 2H) with Tproof = 5 / 20 years (≤10% / >10 % of total SIF), for single alarm trip amplifier with relay output.
- SIL 2 according to IEC 61508:2010 (Route 2H) with Tproof = 17 / 20 years (≤10% / >10 % of total SIF), for 1oo2 arch. of alarm trip amplifiers with relay outs.
- SC 3: Systematic Capability SIL 3.
- Input from Zone 0 (Zone 20) / Division 1, installation in Zone 2 / Division 2.
- mV, TC, 2/3/4wire res./RTD or potentiometer input.
- Selectable CJC: internal PT1000, external RTD or fixed.
- Fastest integration time: 50 ms.
- High Accuracy, µP controlled A/D converter.
- Burnout/internal/cjc/in sensor fault monitor.
- Fully customizable Output range from 0 to 24 mA Output Signal linear or reverse (typical 0/4-20 mA).
- Two independent Trip Amplifiers (SPDT relay contacts).
- High Density, one Analog Output + two Alarms.
- Modbus RTU RS-485 for monitor & amp; configuration.
- Fully programmable operating parameters.
- Three port isolation, Input/Output/Supply.
- EMC Compatibility to EN61000-6-2, EN61000-6-4, EN61326-1, EN61326-3-1 for safety system.
- ATEX, IECEx, UL & C-UL, FM, FMC, INMETRO, EAC-EX, UKR TR n. 898, TÜV Certifications.
- Type Approval Certificate DNV and KR for maritime applications.
- 250 Vrms or Vdc (Um) max. voltage allowed to the instruments associated with the barrier.
- Simplified installation using standard DIN-Rail and plug-in terminal blocks, with or without Power Bus.

Terminal block connections

HAZARDOUS AREA

- + Input for thermocouple TC or for 3, 4 wire RTD or potentiometer
- 14 - Input for thermocouple TC or for 2, 3, 4 wire RTD or potentiometer
- 15 Input for 2, 3, 4 wire RTD or potentiometer
- Input for 4 wire RTD

SAFE AREA

- 1 Common pole (CM1) of Alarm 1 output
- 2 Normally Open pole (NO1) of Alarm 1 output
- 3 Normally Closed pole (NC1) of Alarm 1 output
- Common pole (CM2) of Alarm 2 output
- 6 Normally Open pole (NO2) of Alarm 2 output
- 7 Normally Closed pole (NC2) of Alarm 2 output
- 9 + Power Supply 24 Vdc
- 10 - Power Supply 24 Vdc
- 11 + Analog Output (source current mode) or - Analog Output (sink current mode)
- Analog Output (source current mode) or + Analog Output (sink current mode)

Parameters Table

In the system safety analysis, always check the Hazardous Area/Hazardous Locations devices to conform with the related system documentation, if the device is Intrinsically Safe check its suitability for the Hazardous Area/Hazardous Locations and group encountered and that its maximum allowable voltage, current, power (Ui/Vmax, Ii/Imax, Pi/Pi) are not exceeded by the safety parameters (Uo/Voc, Io/Isc, Po/Po) of the D5273 Associated Apparatus connected to it. Also consider the maximum operating temperature of the field device, check that added connecting cable and field device capacitance and inductance do not exceed the limits (Co/Ca, Lo/La, Lo/Ro) given in the Associated Apparatus parameters for the effective group. See parameters indicated in the table below:

D5273 Terminals		73 Associated atus Parameters	Must be	Hazardous Area/ Hazardous Locations Device Parameters
13-14-15-16	Uo / Voc = 7.2 V		≤	Ui / Vmax
13-14-15-16	lo / lsc = 23 mA		≤	li/ lmax
13-14-15-16	Po / Po = 40 mW		≤	Pi / Pi
D5273 Terminals		sociated Apparatus ters Cenelec (US)	Must be	Hazardous Area/ Hazardous Locations Device + Cable Parameters
13-14-15-16	IIC (A, B) IIB (C) IIA (D) I IIC (E, F, G)	Co / Ca = 13.5 μF Co / Ca = 240 μF Co / Ca = 1000 μF Co / Ca = 1000 μF Co / Ca = 240 μF	2	Ci / Ci device + C cable
13-14-15-16	IIC (A, B) IIB (C) IIA (D) I IIC (E, F, G)	Lo / La = 67.2 mH Lo / La = 268.8 mH Lo / La = 537.7 mH Lo / La = 882.2 mH Lo / La = 268.8 mH	2	Li / Li device + L cable
13-14-15-16	IIC (A, B) IIB (C) IIA (D) I IIIC (E, F, G)	Lo / Ro = 875 μH/ Ω Lo / Ro = 3500 μH/ Ω Lo / Ro = 7000 μH/ Ω Lo / Ro = 11480 μH/ Ω Lo / Ro = 3500 μH/ Ω	2	Li / Ri device and L cable / R cable

For installations in which both the Ci and Li of the Intrinsically Safe apparatus exceed 1 % of the Co and Lo parameters of the Associated Apparatus (excluding the cable), then 50 % of Co and Lo parameters are applicable and shall not be exceeded (50 % of the Co and Lo become the limits which must include the cable such that Ci device + C cable \leq 50 % of Co and Li device + L cable \leq 50 % of Lo). The reduced capacitance of the external circuit (including cable) shall not be greater than 1 μ F for Groups I, IIA, IIB and 600 nF for Group IIC.

If the cable parameters are unknown, the following values may be used: Capacitance 200pF per meter (60pF per foot), Inductance 1µH per meter (0.20µH per foot).

Function Diagram

SAFE AREA, ZONE 2 GROUP IIC T4, NON HAZARDOUS LOCATIONS, CLASS I, DIVISION 2, GROUPS A, B, C, D T-Code T4

Warning

D5273 series is isolated Intrinsically Safe Associated Apparatus installed into standard EN/IEC60715 TH 35 DIN-Rail located in Safe Area or Zone 2, Group IIC, Temperature T4 or Class I, Division 2, Group A, B, C, D, T4 Hazardous Area within the specified operating temperature limits Tamb -40 to +70 °C, and connected to equipment with a maximum limit for power supply Um of 250 Vrms or Vdc. Not to be connected to control equipment that uses or generates more than 250 Vrms or Vdc with respect to earth ground.

D5273 series must be installed, operated and maintained only by qualified personnel, in accordance to the relevant national/international installation standards (e.g. IEC/EN60079-14 Electrical apparatus for explosive gas atmospheres - Part 14: Electrical installations in hazardous areas (other than mines)), following the established installation rules, particular care shall be given to segregation and clear identification of I.S. conductors from non I.S. ones.

De-energize power source (turn off power supply voltage) before plug or unplug the terminal blocks when installed in Hazardous Area or unless area is known to be nonhazardous. Warning: substitution of components may impair Intrinsic Safety and suitability for Zone 2/Division 2. Avertissement: la substitution des composants peut nuire à la sécurité intrinsèque et à l'aptitude à la Zone 2/Div. 2.

Explosion Hazard: to prevent ignition of flammable atmospheres, disconnect power before servicing or unless area is known to be nonhazardous. Danger d'Explosion: pour éviter l'inflammation d'atmosphères inflammables, débrancher l'alimentation avant l'entretien ou à moins que région est connue pour être non dangereuse. Warning: de-energize main power source (turn off power supply voltage) and disconnect plug-in terminal blocks before opening the enclosure to avoid electrical shock when connected to live hazardous potential. Avertissement: débrancher l'alimentation (couper la tension d'alimentation) et les blocs de jonction enfichables avant d'ouvrir le boîtier pour éviter les chocs électriques lorsqu'ils sont connectés à un potentiel dangereux.

Failure to properly installation or use of the equipment may risk to damage the unit or severe personal injury. The unit cannot be repaired by the end user and must be returned to the manufacturer or his authorized representative. Any unauthorized modification must be avoided.

Operation

The input channel of Temperature Signal Converter, Trip amplifiers D5273 accepts a low level dc signal from millivolt, thermocouple or 2-3-4 wire RTD temperature or transmitting Potentiometer sensor, located in Hazardous Area, and converts, with isolation, the signal to a 4-20 mA floating output current to drive a Safe Area load.

Presence of supply power is displayed by a "POWER ON" green signaling LED; integrity of field sensor and connecting line can be monitored by a configurable burnout circuit which, if enabled, can drive analog output signal to upscale or downscale limit. Burnout condition is signaled by red front panel fault LED.

Installation

D5273 series is temperature signal converter housed in a plastic enclosure suitable for installation on EN/IEC60715 TH 35 DIN-Rail, with or without Power Bus.

D5273 series can be mounted with any orientation over the entire ambient temperature range.

Electrical connection are accommodated by polarized plug-in removable screw terminal blocks which can be plugged in/out into a powered unit without suffering or causing any damage (for Zone 2 installations check the area to be nonhazardous before servicing). Connect only one individual conductor per each clamping point, use conductors up to 2.5 mm² (13 AWG) and a torque value of 0.5-0.6 Nm. Use only cables that are suitable for a temperature of at least 85°C. The wiring cables have to be proportionate in base to the current and the length of the cable.

On the section "Function Diagram" and enclosure side a block diagram identifies all connections.

Identify the function and location of each connection terminal using the wiring diagram on the corresponding section,

as an example (thermocouple input, source current output, both trip amplifier outputs of alarms):

Connect 24 Vdc power supply positive at terminal "9" and negative at terminal "10". Connect positive output of analog channel at terminal "11" and negative output at "12".

Connect trip amplifier output of alarm 1 at terminal "1" - "2" (for Normally Open NO contact) or "1" - "3" (for Normally Closed NC contact).

Connect trip amplifier output of alarm 2 at terminal "5" - "6" (for Normally Open NO contact) or "5" - "7" (for Normally Closed NC contact). Connect thermocouple positive extension wire at terminal "13", negative and shield (if any) at terminal "14".

Make sure that compensating wires have the correct metal and thermal e.m.f. and are connected to the appropriate thermocouple terminal, note that a wrong compensating cable type or a swapped connection is not immediately apparent but introduces a misleading measurement error that appears as a temperature drift.

Intrinsically Safe conductors must be identified and segregated from non I.S. and wired in accordance to the relevant national/international installation standards (e.g. EN/IEC60079-14 Electrical apparatus for explosive gas atmospheres - Part 14: Electrical installations in hazardous areas (other than mines)), make sure that conductors are well isolated from each other and do not produce any unintentional connection.

Connect alarm contacts checking the load rating to be within the contact maximum rating 4 A 250 Vac 1000 VA, 4 A 250 Vdc 120 W (resistive load).

To prevent alarm relay contacts from damaging, connect an external protection (fuse or similar), chosen according to the relay breaking capacity diagram from installation instructions.

The enclosure provides, according to EN60529, an IP20 minimum degree of protection (or similar to NEMA Standard 250 type 1). The equipment shall only be used in an area of at least pollution degree 2, as defined in IEC 60664-1. When installed in EU Zone 2, the unit shall be installed in an enclosure that provides a minimum ingress protection of IP54 in accordance with IEC 60079-0. When installed in a Class I, Zone 2 Hazardous Location, the unit shall be mounted in a supplemental AEx or Ex enclosure that provides a degree of protection not less than IP54 in accordance with UL/CSA 60079-0. When installed in a Class I, Division 2 Hazardous Location, the unit shall be mounted in a supplemental enclosure that provides a degree of protection not less than IP54. The enclosure must have a door or cover accessible only by the use of a tool. The end user is responsible to ensure that the operating temperature of the module is not exceeded in the end use application.

Units must be protected against dirt, dust, extreme mechanical (e.g. vibration, impact and shock) and thermal stress, and casual contacts. If enclosure needs to be cleaned use only a cloth lightly moistened by a mixture of detergent in water.

Electrostatic Hazard: to avoid electrostatic hazard, the enclosure of D5273S must be cleaned only with a damp or antistatic cloth.

Any penetration of cleaning liquid must be avoided to prevent damage to the unit. Any unauthorized card modification must be avoided.

D5273 series must be connected to SELV or PELV supplies.

All circuits connected to D5273 series must comply with the overvoltage category II (or better) according to EN/IEC60664-1.

Warning: de-energize main power source (turn off power supply voltage) and disconnect plug-in terminal blocks before opening the enclosure to avoid electrical shock when connected to live hazardous potential.

Start-up

Before powering the unit check that all wires are properly connected, particularly supply conductors and their polarity, input and output wires, also check that Intrinsically Safe conductors and cable trays are segregated (no direct contacts with other non I.S. conductors) and identified either by color coding, preferably blue, or by marking. Check conductors for exposed wires that could touch each other causing dangerous unwanted shorts.

Check that the module has been correctly configured through SWC5090 software. For details please see SWC5090 manual ISM0154.

Turn on power, the "power on" green leds must be lit, output signal must be in accordance with the corresponding input signal value and input/output chosen transfer function, alarm LED should reflect the input variable condition with respect to trip points setting. If possible change the sensor condition and check the corresponding Safe Area output.

Notes:RTD/resistance accuracy shown in 4-wires configuration, in slow acquisition mode, after calibration. TC/mV Accuracy shown in slow acquisition mode, after calibration.

Supported Modbus functions:

Code	Name	Notes
03	read holding registers	reads a stream of words from memory
04	read input registers	reads a stream of words from memory
08	diagnostics: subcode 0	returns query data
06	write single register	writes a word in memory
16	write multiple registers	writes a stream of words in memory

Supported Modbus parameters:

The unit can communicate via Modbus RTU RS-485 protocol. Below is a list of all available registers.

Each Modbus parameter is described by one 16-bit word.

- 'Addr.' is the address of the parameter.
- 'Description' explains the function of the parameter.
- 'Rights' identifies the operation that can be executed by the user: RO (Read Only);

WO (Write Only);

RW (Read and Write).

- 'Type' indicates the kind of the variable: SINT8 / UINT8: signed / unsigned 8 bits integer;

SINT16 / UINT16: signed / unsigned 16 bits integer;

SINT32 / UINT32: signed / unsigned 32 bits integer; FLOAT: floating point single precision real;

DOUBLE: floating point double precision real;

the suffix '[n]' indicates an array of n elements of the corresponding type.
